

Protein Biochemist

Heptares is a Drug Discovery Company located in Hertfordshire UK, working on G protein coupled receptors involved in CNS and metabolic disease. We are using a unique structure based approach, to characterise this important family of receptors and develop novel innovative therapeutics for these diseases.

We are currently seeking enthusiastic and motivated scientists with experience in the expression and purification of proteins for structural and biophysical studies. This is an exceptional opportunity to participate in pioneering science whilst helping to grow an Industry-leading Drug Discovery company.

Applicants should have a PhD and post-graduate experience in a research environment. Candidates should be familiar with protein expression and purification in a variety of expression systems such as baculovirus and mammalian cells. Previous experience of working with GPCRs or other membrane proteins would be an advantage. Experience of working in a drug discovery environment where structural studies are used to drive medicinal chemistry would also be of benefit.

Further information can be found on our website (www.heptares.com). Please send your application to hr@heptares.com, quoting reference number 2012/1B
